INFRAGISTICS®

Infragistics Partners with CData to Support Expanding Data Connectivity Requirements of Enterprise & Mobile Application Developers

Infragistics Ultimate is a comprehensive toolset for UX designers, visual designers, and developers who are building apps for a wide range of both native and hybrid platforms, including desktop, modern web, and native mobile. Through their comprehensive tool suite, Infragistics enables UI developers to efficiently build superior user interfaces and create more powerful applications, more quickly.

The CData drivers provide live data connectivity for Infragistics Ultimate to 130+ SaaS, NoSQL, and Big Data sources commonly used by UI and UX developers in the development of enterprise applications. This union of rapid back-end data access with front-end UI capabilities provides developers with a powerful new tool to quickly build the kinds of robust, user-friendly applications that enterprises demand.

"With simple, friction-free integration of high-performance, real-time data connectivity to our suite of intuitive UI controls, data visualizations, and prototyping tools, Infragistics can provide UI developers and UX professionals even faster paths to building amazing user experiences"

-- Jason Beres, Senior Vice President of Developer Tools, Infragistics

Infragistics

Infragistics is a worldwide leader in providing tools and solutions to accelerate application design and development, insights, and collaboration for any organization. More than two million developers use Infragistics enterprise-ready UX and UI toolkits to rapidly prototype and build high-performing applications for the cloud,web, Windows, iOS and Android devices.

Challenge

As data has become increasingly vital to core business functions, it has also become more decentralized. With the typical organization running 20 or more SaaS applications — and at least as many on-premise databases and internal apps — integrating, managing, and maintaining data connectivity presents a daunting developer challenge.

Solution

Working in partnership with Infragistics, CData augments the connectivity capabilities of their Infragistics Ultimate tooling, enabling developers to build more powerful, rich user experiences infused with live data.

Benefits

ADO.NET Data Providers and API integration technologies from CData combine seamlessly with Infragistics tools, supporting developers across a complete spectrum of desktop, mobile, and cloud development.

Results

The end result is enhanced developer productivity and far better software applications. With Infragistics and CData, developers are able to build applications that look better, run faster, are more connected, easier to maintain, and ultimately cost less to produce.
